[Abstract. In these three lectures an attempt is made to describe, in a certain context, experimental evidence for anharmonic behavior near structural phase transitions \(SPTs\): Theoretically, it is expected that systems with lower effective lattice dimensionality and shorter ranges of forces are, near T_C, more dominated by correlated](#)

Anharmonic Lattices, Structural Transitions and Melting ...

From 2nd order transitions the emphasis of the programme moves gradually to 1st order transitions by covering such topics as order-disorder structural transitions in simple molecular crystals and tricritical phenomena. The last part is devoted to melting, including discussions on the dynamics of solids and liquids near their melting points.
