## Biological Invasions | Smithsonian Environmental Research ...

Biological invasions are a major force of change, affecting many dimensions of life on Earth. Invasions result when species colonize new geographic regions, which are disjunct (isolated) from existing populations. Humans have dramatically altered invasion dynamics, especially with the global expansion of trade in modern times. Historically

Many biological control programs have achieved permanent low-level control of agricultural pests, and yearly benefits in the United States are around \$180 million. However, a biological control agent is also an introduced species, and many survive without controlling the target pest. Whether or not they exert the desired control, some may attack nontarget organisms. In several instances, rare
