Cosmological Applications of Algebraic Quantum Field ...

Abstract: This monograph provides a largely self-contained and broadly accessible exposition of two cosmological applications of algebraic quantum field theory (QFT) in curved spacetime: a fundamental analysis of the cosmological evolution according to the Standard Model of Cosmology and a fundamental study of the perturbations in Inflation. The two central sections of the book dealing with these applications are preceded by sections containing a pedagogical introduction to the subject as

Abstract. In this chapter we discuss two cosmological applications of algebraic quantum field theory in curved spacetimes. In the Standard Model of Cosmology the (Λ) CDM-model the matter-energy content of the universe on large scales is modelled by a classical stress-energy tensor of perfect fluid form.
