A dynamical system is a manifold M called the phase (or state) space endowed with a family of smooth evolution functions t that for any element of $t \in T$, the time, map a point of the phase space back into the phase space. [Dynamical Systems | Applied Mathematics | University of ...](#)

To study dynamical systems mathematically, we represent them in terms of differential equations. The state of dynamical system at an instant of time is described by a point in an n -dimensional space called the state space (the dimension n depends on how complicated the systems is - for the double pendulum below, $n=4$).

The dynamical system is two-dimensional, and since θ and ω evolve continuously, it is a continuous dynamical system. In the above bacteria dynamical system, we plotted the one-dimensional state space (or phase space) as a blue line.

Dynamical Systems: Dynamical systems theory is the mathematics of change. It can be traced back at least to the ancient Greeks, but it is first recognizable to modern eyes in the work of Isaac Newton.

dynamical systems - $\dot{x} = y - a_0 - a_1 x + a_2 x^2 \dots$ $S(ii)$ implies $\dot{x} = 0$ (the Linear system) is either a stable or unstable node. $S(iii)$ implies $\dot{x} = 0$ it is a center. $S(i)$ implies $\dot{x} = 0$ it is either a stable node or an unstable node or a saddle.

Dynamical systems theory is an area of mathematics used to describe the behavior of the complex dynamical systems, usually by employing differential equations or difference equations.

Dynamical Systems Theory in Psychology: Assistance for the ...

Dynamical Systems Theory (DST) has generated interest and excitement in psychological research, as demonstrated by the recent statement, the dynamical perspective has emerged as a primary paradigm for the investigation of psychological processes at different levels of personal and social reality (Vallacher et al., 2010, p. 263).

Bifurcation in the dynamical system with clearances

Bifurcation in the dynamical system with clearances N dynamical systems either by design or due to manufacturing tolerances and wear. The characteristics of systems with clearances include abrupt variation of stiffness which is inherently nonlinear and difficulties that occur in their analysis exhibit great diversity. In this paper, the bifurcation in the two-degree-of-freedom dynamical
