High-redshift galaxy populations | Nature

A small number of high-redshift objects have been found by targeting X-ray and radio sources and most recently, -ray bursts. The -ray burst sources may provide a way to reach even higher

High Redshift Objects - University of Oregon

The most distant objects are found by the 'dropout' method, where the high redshift of a galaxies means that the blue portion of its spectrum will have very little luminosity compared to its red light. The object appears to disappear or dropout in blue light.

Redshift - Wikipedia

Other high-redshift events predicted by physics but not presently observable are the cosmic neutrino background from about two seconds after the Big Bang (and a redshift in excess of $z > 10^{10}$) and the cosmic gravitational wave background emitted directly from inflation at a redshift in excess of $z > 10^{25}$.

What is high redshift in the universe? - Quora

Red shift is a typical case of Doppler effect. Doppler effect is the shift in frequency or wavelength of sound waves with change in relative position of source and observer. One is familiar with the fact that the sound of the siren of an approaching train is more high-pitched. When this effect is applied to a visible rays (electromagnetic rays), it has two special cases for astronomical
