Anionic Polymerization - an overview | ScienceDirect Topics

Anionic Polymerization. Anionic polymerizations are chain-growth processes in which the active center to which successive monomers are added is a negative ion that is associated with a positive counterion.

Ionic polymerization - Wikipedia

Ionic polymerization is a chain-growth polymerization in which active centers are ions or ion pairs. It can be considered as an alternative to radical polymerization, and may refer to anionic polymerization or cationic polymerization.

Ionic Polymerization in Ionic Liquids | IntechOpen

In recent years, an enormous progress has been made in the development of ionic polymerizations in ionic liquid. The polymerization reactions for cationic and anionic monomers were realized in ionic liquids. Some cationic polymerizations in ionic liquid indicated some living-controlled characteristics. However, only the control of molecular weight and polydispersity have been achieved.

Ionic Polymerization - an overview | ScienceDirect Topics

L. BOGGH, R. MEZZENGA, in Comprehensive Composite Materials, 20002.19.3.2 Ionic Polymerization. The principles of ionic polymerization are very similar to those of free radical polymerization in the sense that the

polymerization proceeds through a reaction site, which in this case is an ion at the front-end of the growing network or chain.
