**Ionic fragmentation processes of core-excited -alanine

Ionic fragmentation of core-excited -alanine in gas phase
was observed. The most dominant ionic species is COOH⁺
+ for all core-ionizations at C 1s, N 1s, and O 1s. An
increase in COO⁺ and a decrease in COOH⁺, which
were observed as core-hole atom selectivity for the O 1s
ionization, are explained by the enhancement of O-H bond
scission.
