Their characteristics in regard to oxygen transport and regulation of tissue oxygenation will now be presented. Hemoglobin-Based Oxygen Carriers Since plasma cannot carry much oxygen, due to its low solubility for oxygen, and hemoglobin is the oxygen carrier within RBCs, it is natural to consider hemoglobin when formulating an artificial oxygen carrier.

[Oxygen Transport | Pathway Medicine](#)

Oxygen transport in the body occurs in two basic steps involving the reversible loading and unloading of hemoglobin with oxygen. Hemoglobin is loaded with oxygen as it passes through the pulmonary capillaries and is then transported to the peripheral tissues where the oxygen is unloaded.

The majority of oxygen molecules are carried from the lungs to the body's tissues by a specialized transport system, which relies on the erythrocyte (the red blood cell). Erythrocytes contain a metalloprotein, hemoglobin, which serves to bind oxygen molecules to the erythrocyte (Figure 1).

Haemoglobin is the main component in oxygen transport throughout the body. People who have disorders affecting the quality or amount of haemoglobin suffer serious problems with transporting oxygen to their tissues.

Oxygen Transport - Respiratory System | Coursera

We hope that you are enjoying the course! This module considers the respiratory system. In these lessons, we explore topics such as how we get air into our lungs, the role of airway resistance in ventilation, the transport of oxygen and carbon dioxide between the lungs and tissues, and the regulation of breathing.

Hemoglobin moves O2 and CO2 | Human anatomy and physiology | Health & Medicine | Khan Academy

Learn the two ways that oxygen moves from the lungs to the tissues, and the three ways that carbon dioxide returns from the tissues to the lungs.

ABC of oxygen: Oxygen transport 2. Tissue hypoxia

Tissues vary considerably in their sensitivity to hypoxia. Neurological cells tolerate hypoxia for only a few minutes whereas bladder smooth muscle may survive for several days without oxygen. This has important implications in the management of oxygen transport and monitoring of tissue hypoxia in
