Secondary Prevention of Coronary Artery Disease  
secondary prevention include medical therapy and surgical revascularization in the form of coronary artery bypass grafting or percutaneous coronary intervention. Medical therapy focuses on

Secondary prevention of coronary artery disease. Options for secondary prevention include medical therapy and surgical revascularization in the form of coronary artery bypass grafting or percutaneous coronary intervention. Medical therapy focuses on comprehensive risk factor modification. Therapeutic lifestyle changes (including weight management, physical activity, tobacco cessation, and dietary modification) improve cardiac risk factors and are universally recommended by evidence-based guidelines. Treatment of hypertension and  
Secondary prevention of coronary heart disease in the elderly

An American Heart Association scientific statement on secondary prevention of coronary heart disease (CHD) in the elderly pointed out that at necropsy 50% of elderly women and 70–80% of elderly men have obstructive coronary artery disease. 1 Moreover, in the USA, the prevalence of CHD over the age of 75 years is 2.2% for men and 1.3% for women.

Secondary Prevention in Coronary Artery Disease and ...

Despite considerable effort in primary prevention, coronary heart disease continues to be the leading cause of death in the industrialized nations. The patient who survives his first myocardial infarction carries approximately a tenfold risk of recurrence and sudden death when compared to the normal population. The concept of secondary prevention, therefore, has emerged as an active strategy

#### WHO | Prevention of Recurrences of Myocardial Infarction ...

One systematic review of primary and secondary prevention trials has reported that statins constitute the single most effective type of treatment for reducing fatal and non-fatal myocardial infarctions and cardiovascular deaths. There is insufficient evidence about the effects of routinely reducing cholesterol in patients with a prior stroke.

#### Non-ST-elevation myocardial infarction - Prevention | BMJ ...

Statin therapy in patients who are at risk for future development of coronary artery disease improves survival and reduces future risk of cardiovascular events. Current guidelines recommend the use of a cardiovascular risk calculator to identify those patients most at risk and guide initiation of statin therapy for primary prevention.
