Many problems lend themselves to being solved with systems of linear equations. In "real life", these problems can be incredibly complex. This is one reason why linear algebra (the study of linear systems and related concepts) is its own branch of mathematics.

Word Problems Involving Systems of Linear Equations. Many word problems will give rise to systems of equations --- that is, a pair of equations like this: You can solve a system of equations in various ways. In many of the examples below, I'll use the whole equation approach. To review how this works, in the system above, I could multiply the first equation by 2 to get the y-numbers to match
