Stellar evolution - Wikipedia

Stellar evolution is the process by which a star changes over the course of time. Depending on the mass of the star, its lifetime can range from a few million years for the most massive to trillions of years for the least massive, which is considerably longer than the age of the universe.

The analysis of stellar stability against fluctuations plays a significant role to study its existence. It is remarkable that different instability ranges of the astronomical bodies lead to different patterns of the evolution and structure formation. The stability of such systems can be discussed through dynamical equations. Misner & Sharp
