The main goal of this work is to revisit the proof of the global stability of Minkowski space by D. Christodoulou and S. Klainerman, [Ch-Kl]. We provide a new self-contained proof of the main part of that result, which concerns the full solution of the radiation problem in vacuum, for arbitrary asymptotically flat initial data sets.

For generic initial data to the evolution problem in general relativity, there cannot be naked singularities.

Unfortunately, if you ask me to define the terms in that hypothesis, I can just shrug and tell you, "no can do".
