Theory of Algorithms the branch of mathematics concerned with the general properties of algorithms. Seminal ideas relating to the notion of an algorithm can be found in all periods of the history of mathematics. However, they congealed into the algorithm concept proper only in the 20th century. Algorithms became a subject of independent study.

It was suggested by Kolmogorov in 1965 that the theory of algorithms be used as the foundation of information theory (cf. Algorithmic information theory). The theory of algorithms is the theoretical foundation for a number of problems in computational mathematics, and is closely related to cybernetics, in which an important subject is the study of control algorithms.
